A new recombinant DNA vector construct has been developed which encodes a fusion protein and is suitable for introduction into a bacterial host. The vector comprises: (a) DNA encoding at least one cationic bactericidal/permeability increasing peptide (BPI), (b) DNA encoding a carrier protein, and (c) DNA encoding an amino acid (as) cleavage site located between (a) and (b). The present sequence represents the protein from the pING3793 vector construct which codes for a BPI fusion protein. The peptides have many uses including the treatment of bacterial and fungal infections. BPI peptides also bind to endotoxins and heparin, neutralising their effects. The peptides have further been shown to
                                                                    120

ö
       proteins have been found to be expressed in large amounts without significant proteolysis, and in some cases are actually secreted from the host cells. This allows the indirect production of anti-microbial BPI peptides in microbial hosts
                                                                                                                                                                                                                                                     83 GQLAEIAIDVTSVYVVGYQVRNRSYFFKDAPDAAYEGLFKNTIKTRLHFGGTYPSLEGEK 142

selectively eliminate any cell type to which a RIP component is targetted, by the specific binding capacity of the second component of the agent. They can be used in the treatment of diseases where the elimination of a particular cell type is desired, such as autoimmune disease, cancer and graft-versus-host disease. (Updated on 25-MAR-2003 correct PN field.)

protein (RIP) gelonin, one of the nine RIPs described in AAR63903-R63911.
                                                                                                                                                                                                  9
                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 - which
include gene fusion products and immunoconjugates. CTAs may be used to selectively eliminate any cell type to which a RIP component is targetted, by the specific binding capacity of the second component of the agent. They can be used in the treatment of diseases where the elimination of a particular cell type is desired, such as autoimmune disease, cancer and graft-versus-host disease. (Updated on 25-MAR-2003 correct PN field.)

RIPs are key components of cytotoxic therapeutic agents (CTAs), which include gene fusion products and immunoconjugates. CTAs may be used to selectively eliminate any cell type to which a RIP component is targetted, by the specific binding capacity of the second component of the agent. They can be used in the treatment of diseases where the elimination of a particular cell type is desired, such as autoimmune disease, cancer and graft-versus-host disease. (Updated on 25-MAR-2003 correct PN field.)

protein (RIP) gelonin, one of the nine RIPB described in AAR63903-R63911. RIPB are key components of cytotoxic therapeutic agents (CTAB), which include gene fusion products and immunoconjugates. CTAB may be used to selectively eliminate any cell type to which a RIP component is targetted, by the specific binding capacity of the second component of the agent. They can be used in the treatment of diseases where the elimination of a particular cell type is desired, such as autoimmune disease, cancer and graft-versus-host disease. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polynucleotide(s) encoding type I ribosome-inactivating proteins - which are suitable for use as components of cytotoxic therapeutic agents.

AAR63912-R63924 are analogs of AAR63903 type I ribosome-inactivating protein (RIP) gelboin, one of the nine RIPB described in AAR63903-R63911. RIPB are key components of cytocoxic therapeutic agents (CTAB), which include gene fusion products and immunoconjugates. CTAB may be used to selectively eliminate any cell type to which a RIP component is targetted, by the specific binding capacity of the second component of the agent. They can be used in the treatment of diseases where the elimination of a particular cell type is desired, such as autoimmune disease, cancer and graft-versus-host disease. (Updated on 25-MAR-2003 to correct PN field.)

           AAR63912-R63924 are analogs of AAR63903 type I ribosome-inactivating protein (RIP) gelonin, one of the nine RIPs described in AAR63903-R63911. RIPs are key components of cytotoxic therapeutic agents (CTAB), which include gene fusion products and immunoconjugates. CTAB may be used to selectively eliminate any cell type to which a RIP component is targetted, by the specific binding capacity of the second component of the agent. They can be used in the treatment of diseases where the elimination of a particular cell type is desired, such as autoimmune disease, concer and graft-versus-host disease. (Updated on 25-MAR-2003 to

AAR63912-R63924 are analogs of AAR63803 type I ribosome-inactivating protein (RIP) gelonin, one of the nine RIPs described in AAR63903-R63911. RIPs are key components of cytcoxic therapeutic agents (CTAs), which include gene fusion products and immunoconjugates. CTAs may be used to selectively eliminate any cell type to which a RIP component is targetted, by the specific binding capacity of the second component of the agent. They can be used in the treatment of diseases where the elimination of a particular cell type is desired, such as autoimmune correct by field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

abrin-a precursor - Indian licorice (fragment)
N;Contains: rRNA N-glycosidase (BC 3.2.2.2)
C;Species: Abrus precatorius (Indian licorice)
C;Date: 31-Dec.1993 #sequence revision 01-Aug-1997 #text change 09-Jul-2004
C;Accession: 833429; JT0202; A39761; JC1398; S14472; S24\overline{13}; S74110; S74111

Type I ribosome-inactivating protein, ricin, momordin, immunoconjugate, autoimmune disease, cell killing, toxin, human engineered antibody; variable region, light chain; cell targetting; chimeric antibody; SLT.

Escherichia coli

 .20 /note= "intervening loop includes protease sensitive amino acid sequence" Location/Qualifiers 92WO-US009487. 91US-00787567. Key Disulfide-bond 04-NOV-1992; 04-NOV-1991; 19-JUN-1992; WO9309130-A1 13-MAY-1993.

(XOMA) XOMA CORP.

Lei Lane JA, Carroll SF, Better MD, Berhard SL,

SP;

WPI; 1993-167617/20.

Analogues of type I ribosome inactivating protein - useful as cytotoxic agents, immuno toxins for treating auto immune diseases, cancer, graft versus host disease and selective cell killing in-vivo.

Example 10; Page 114; 163pp; English.

The invention covers analogues of the plant type I RIP gelonin which have a non-naturally occurring Cys residue in a position which enables the analogue to be conjugated via a disulphide linkage to a molecule which specifically binds to a target cell. Pref. target-cell binding molecules

Non toxic Shiga toxoids, Fusion proteins of His-tagged Shiga toxins/toxoids and antibodies can be used in the treatment, diagnosis or prevention of infections mediated by toxins of the Stx family. These are associated with haemorrhagic colitis and the life-threatening sequela, haemolytic uremic syndrome. Shiga antibodies are also useful for the treatment, diagnosis and prevention of disease and infections by pathogenic Escherichia coli
are antibodies or their fragments, esp. human engineered H65 antibody fragments. Fusion constructs were assembled that included a natural sequence gelonin gene fused to an H65 truncated heavy chain gene or an H65 light chain (kappa) gene. A DNA linker encoding a peptide segment of the B.coll shiga-like toxin was inserted between the gelonin gene and the Ab gene. The resulting immunoconjugates can be used as cytotoxic therapeutic agents. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Purification and isolation of histidine-tagged Shiga toxins - useful in vaccines against haemorrhagic colitis and haemolytic uremic syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Histine-tag; toxoid; antibody; treatment; diagnosis; prevention; Stx; haemorrhagic colitis; haemolytic uremic syndrome.

This is the Shiga-like toxin (SLT) subunit A amino acid sequence. SLT is a bacterial toxin related to the Shiga toxin (ShT). SLT and ShT have the smallest known B subunit of all AB toxins, and the A subunit has identical carelytic activity as the corresponding subunit in ricin. The B identical actal sequences are used in the methods of the invention, which relates to the creation of a library of microorganism clones producing mutant proteins which are then screened for their ability to specifically bind to and kill target cell. AAV39395-V39399 and AAV43001-Y43024 are examples of mutant B subunits identified by the methods of the invention. The B subunit of the B subunit may target the toxin to a specific cell. Cycotoxic mutant proteins and medicaments having binding to specific cell. Cycotoxic mutant proteins and medicaments having binding cued to identify therapeutic proteins and medicaments having binding specificity for a target cell. The cyctoxic mutants can also be used to construct diagnostic probes for detecting the presence of cell surface markers. These medicaments can be used to target medicines to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Compositions containing neutralising antitoxin against one or more B. coli verotoxin (VT) can be used to treat intoxicated adults and children with enteric bacterial infections. They may also be used as prophylactics e.g. as a vaccine, against diarrhoeal disease or the development of extra-intestinal complications of B.coli infection, especially haemolytic uraemic syndrome. The antitoxin can also be used to detect B. coli VT in a sample. The VT is recombinant, preferably a fusion protein containing a non-VT protein sequence and part of the B.coli VTI or VT2 sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Compsn. contg. neutralising antitoxin against B.coli vero-toxin - used to treat intoxicated individuals, and as a prophylactic against diarrhoeal disease or extra-intestinal complications of B.coli infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pro-Ribosome Inactivating Protein; proRIP; peptide linker; cancer; inactivation; eukaryotic ribosome; alpha fragment fragment; inhibitor; protein synthesis; N-Glycosidase; glycosidic bond; liver; rat; ribosomal 28S RNA; cellular proliferation; HIV-infected T cell.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents an exemplary cell toxin, which can be incorporated into the conjugates of the invention. The specification describes a conjugate, comprising a targeted agent and a chemokine receptor ligand. The conjugate binds to a chemokine receptor ligand. The conjugate binds to a chemokine receptor ligand. The conjugate binds to a chemokine receptor resulting in internalisation of the targeted agent in cells bearing the receptor. The conjugates are used for formulating a medicament or for treating disorders associated with inflammatory responses resulting from activation, proliferation and migration of immune effector cells. The disorders or disease states comprise secondary tissue damage such as central nervous system (CMS) injury, CMS inflammatory diseases, inflammatory bowel diseases, inflammatory lung diseases, inflammatory lung diseases, inflammatory near tenal diseases, inflammatory lung diseases, inflammatory near diseases, inflammatory near 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                 Chemokine receptor; ligand; inflammatory response; immune effector cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A new therapeutic agent comprising a conjugate for treating secondary tissue damage and other disease conditions like Alzheimer's disease, stroke, Parkinson's disease and atherosclerosis.
                                                                                                                               secondary tissue damage; central nervous system injury; shiga; CNS inflammatory disease; neurodegenerative disorder; heart disease; inflammatory bowel disease; PCR primer; inflammatory joint disease; inflammatory kidney; renal disease; inflammatory in as inflammatory in as inflammatory in as inflammatory inflammator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Verotoxin, Bacherichia coli, enteric infection, diarrhoea, vaccine, haemolytic uraemic syndrome, detection.
                              acid sequence of exemplary cell toxin shiga toxin A-chain.

The proRIP has a selectively removable, internal peptide linker. The precursor sequence is incapable of inactivating eukaryotic ribosomes, but can be converted by removal of the linker into a protein having alpha and beta fragments and being capable of inactivating eukaryotic ribosomes. RIPs are potent inhibitors of eukaryotic protein synthesis. They possess a highly specific N-glycosidase activity which cleaves the glycosidic bond of adenine 4324 of rat liver ribosomal 285 RNA. RIP's selectively inhibit cellular proliferation of cells, e.g. cancer cells and HIV-infected T cells. The inactive proRIP proteins make it possible to provide protein synthesis inhibitors with uses in practical and improved ways not before possible. The RIP can be used to make cytotoxic conjugates. (Updated on 25-MAK-2003 to correct PP field.)

which was engineered to contain a selectively removable internal peptide
which was engineered to contain a selectively removable internal peptide
complete sequence separating the alpha and beta units of the RIP. When
separated the two units regain activity and are capable of inactivating
cenkaryotic ribosomes and hence preventing protein production. Many
different RIPs may be produced with an internal linker including maize
complete the substance of the formal linker including maize
complete the substance of the formal linker including maize
complete to a monoclonal antibody. A further use is in HIV therapy
(see US4869903). There is interest in expressing RIP recombinantly in
chost eukaryotic cells, because of the capacity to provide correct post-
translational processing. However, RIPs effectively inhibit protein
complete are not cytotoxic to eukaryotic cells, they can be
recombinantly expressed in such cells and then converted to active RIP
complete the complete control of the capacity to provide can be
recombinantly expressed in such cells and then converted to active RIP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bacterial cell for recombinantly expressing bacterial toxins in large quantities useful for immunization and treatment of bacterial infections,
                                                                                                                                                 DNA encoding pro-ribosome inactivating proteins - inactive precursors of ribosome inactivating proteins; can be expressed in eukaryotic cells without causing cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        VT-1; verotoxin; antitoxin therapy; fusion protein; affinity tag; food; recombinant production; screening; dairy; anti-bacterial; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The invention relates to antitoxin therapy for humans and other animals.

Antitoxins which neutralize the pathologic effects of Escherichia coli
coxins are generated by immunization of avian hosts with recombinant
coxins are generated by immunization of avian hosts with recombinant
coxins are generated by immunization of such rectoxin (VI) is a fusion
protein comprising a non-verotoxin protein (especially an affinity tag)

Competent of proteins (approximately 8 kDa), so use of a small affinity tag was
preferred (i.e. polyhistidine). A polyhistidine affinity tag facilitates
competent of maltose binding protein (MBP) fused subunits was
competent of maltose binding protein (MBP) fused subunits was
competent control is necessary to permit cell viability. Bacterial host
colls expressing a recombinant expression vector encoding a polyhistidine
colls expressing a recombinant expression vector encoding a polyhistidine
affinity tag and a portion of the VT-2 B chain are claimed. The vector is
colosen from pST24hisVT2BL, pST24hisVT2BL, and pST24TSB, where "L"
indicates that the vector encodes the mature form of the protein and
"L" indicates that the vector encodes the mature form of the protein.
The bacterial cell is capable of expressing large quantities (40 mg/l) of
CV T-2B. The toxins are useful for immunizing non-mammals and for detecting
conditions are useful for immunizing non-mammals obtained from grant
conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Verotoxin; VT1-A; antitoxin; antidiarrheal; antibacterial; haemostatic; vaccine; haemorrhagic cystitis; balantitis; haemolytic uremic syndrome;

New recombinant expression vector encoding affinity tag and Bscherichia

N-PSDB; ABK11775.

```
This invention relates to a recombinant expression vector encoding an affinity tag and protein comprising at least a portion of a bacterial toxin consisting of Escherichia coli type 1 or type 2 verotoxin. The expression vector can be used to produce recombinant verotoxin protein which can be used to protein against diseases caused by E. coli such as verotoxin haemorrhagic cystitis and balantitis. The antitoxins are useful for treating humans and animals intoxicated with a bacterial corn, particularly E. coli verotoxin. The antitoxins may also be used in the preventative treatment and in disapnostic assays to detect the preventative treatment and in disapnostic assays to detect the preventative treatment and in disapnostic assays to detect the preventative treatment and in disapnostic assays to detect the presence of a toxin in a sample. The polypeptides derived from E. coli verotoxins are useful as immunogens for the production of vaccines, including multivalent vaccines and antitoxins, which can be administered to a subject at risk of diarrhoeal disease or at risk of developing extra intestinal complications of E. coli infections, e.g. haemolytic uremic syndrome, thrombotic thrombocytopenic purpura. The present sequence represents the E.coli verotoxin protein VII-A used to create the expression vectors of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel enterchaemorragic Escherichia coli 0157:H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 0157:H7 infection. The nucleotide sequence of the genome of Enterchaemorragic E coli 0157:H7 was determined. The present sequence represents an B. coli 0157:H7-specific polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Enterohemorragic Escherichia coli O157:H7-specific nucleic acid molecule and a polypeptide and its use, a polypeptide, a vector and a host cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
  coli type 1 or type 2 verotoxin, useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Enterohaemorragic E. coli 0157:H7-specific protein SEQ ID NO: 590.

This protein comprises the Escherichia coli phage H19B Shiga-like toxin.

ONA (see AAT91637) encoding the A subunit of the Shiga-like toxin was

used to construct a Shiga-like toxin A-diphtheria toxin B'-interleukin-2

(SLTA-DTB'-L12) gene that was expressed in E. coli. The hybrid protein

(SLTA-DTB'-L12) gene that was expressed in E. coli. The hybrid protein

can be isolated and used to treat conditions involving over-production of

can be aring 112 receptors, such as certain T-cell lymphomas and organ

transplant rejection crises. The hybrid inactivates ribosomes in cells

bearing 112 receptors, resulting in cessation of protein synthesis and

death of target cells. Claimed hybrid inactivates ribosomes in cells

comain and a cell binding domain from e.g. a hormone, growth factor or

protein toxin. The hybrid molecules can be used for the delivery of

agents (e.g. therapeutic genes, toxins, detectable labels) into cells.

The use of a translocation mechanism ensures that the hybrid will be

effective in relatively low doses, since a high proportion of the

cubecules can be manufactured as a single hybrid recombinant protein,

composition. (Updated on 25-MAR-2003 to correct PF field.) (Updated on 17

                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to attenuated verotoxins (VTs) comprising mutations in one or more of the regions spanning residues 167-172 or 202-207 of the mature verotoxin A subunit. The invention also relates to the mutant verotoxin A subunit and the DNA encoding it; anticancer agents containing verotoxin A subunit and a ligand, especially troponin I, which binds to a cancer cell; a fusion gene encoding the mutant A subunity and vectors encoding the mutant A subunity froponin I fusion protein; and vectors encoding either the mutant verotoxin A subunits, to the fusion gene of the invention. The attenuated verotoxins, A subunits, fusion proteins, and polymucleotides encoding them are useful in the treatment of cancer. The present sequence represents the A subunit

The invention relates to antitoxin therapy for humans and other animals.

Antitoxins which neutralize the pathologic effects of Bacherichia coli
coxins are generated by immunization of avian hosts with recombinant
coxins are generated by immunization of avian hosts with recombinant
coxins are generated by immunization of avian hosts with recombinant
coxins are generated by immunization (WI) is a fusion
protein comprising a non-verotoxin protein (especially an affinity tag)

Coxinsed to a portion of the VT-1 or VT-2 sequence. The VT B chains are
small proteins (approximately 8 kDs), so use of a small affinity tag was
preferred (i.e. polyhistidine). A polyhistidine affinity tag facilitates
considerated to poor recovery of his-tagged VT-1 A and VT-2 A chains,
corporate control is necessary to permit cell viability. Bacterial host
colls expression of malcose binding protein (MBP) fused aubunits was
undertaken. Due to the toxicity of the VT-2 B subunit, strict uninduced
conform from protein of the VT-2 B chain are claimed. The vector is
affinity tag and a portion of the VT-2 B chain are claimed. The vector is
colls expressing a recombinant expression vector encoding a polyhistidine
affinity tag and a portion of the VT-2 B chain are claimed. The vector is
colled that the vector encodes the mature form of the protein and
"L-" indicates that the vector encodes the mature form of the protein and
"L-" indicates that the vector encodes the mature form of the protein and
"L-" indicates that the vector encodes the mature form of the protein
conformation and particulation of application of and particulation and encodes the prepare of expression and for detecting
conformatical amples, bloological samples and samples obtained from god and
air and a polygical samples and samples obtained from god and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bacterial cell for recombinantly expressing bacterial toxins in large quantities useful for immunization and treatment of bacterial infections, comprises expression vector encoding bacterial toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Verotoxin; VT1-A; antitoxin; antidiarrheal; antibacterial; haemostatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Compositions containing neutralising antitoxin against one or more B. coli verotoxin (VT) can be used to treat intoxicated adults and children with enteric bacterial infections. They may also be used as prophylactics e.g. as a vaccine, against diarrhoeal disease or the development of extra-intestinal complications of B.coli infection, especially haemolytic uraemic syndrome. The antitoxin can also be used to detect B. coli VT in a sample. The recombinant, preferably a fusion protein containing a non-VT protein sequence and part of the B.coli VTI or VT2 sequence. This is a histidine tagged version of subunit A of VTI as expressed from the vector pBT-23b
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Compsn. contg. neutralising antitoxin against B.coli vero-toxin - used to treat intoxicated individuals, and as a prophylactic against diarrhoeal disease or extra-intestinal complications of B.coli infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    VT-1; verotoxin; antitoxin therapy; fusion protein; affinity tag; food; recombinant production; screening; dairy; anti-bacterial; vaccine;

This invention relates to a recombinant expression vector encoding an affinity tag and protein comprising at least a portion of a bacterial toxin consisting of Escherichia coli type 1 or type 2 verotoxin. The expression vector can be used to produce recombinant verotoxin protein which can be used to create a vaccine against diseases caused by E. coli such as verotoxin haemorrhagic cystitis and balantitis. The antitoxins care useful for treating humans and animals intoxicated with a bacterial toxin, particularly E. coli verotoxin. The antitoxins may also be used in the preventative treatment and in diagnostic assays to detect the consistence of a toxin in a sample. The polypeptides derived from E. coli verotoxins are useful as immunogens for the production of vaccines, including multivalent vaccines and antitoxins, which can be administered including multivalent vaccines and antitoxins, which can be administered including complications of E. coli infections, e.g. haemolytic uremic syndrome, thrombotic thrombotytopenic purpura. The present sequence represents the HIS tagged E.coli VTI-A verotoxin protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New recombinant expression vector encoding affinity tag and Escherichia coli type 1 or type 2 verotoxin, useful for treating or preventing diseases due to E. coli verotoxins and in producing vaccines.
vaccine; haemorrhagic cystitis; balantitis; haemolytic uremic syndrome; thrombotic thrombocytopenic purpura.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match 100.0%; Score 114; DB 5; Length 323; Best Local Similarity 100.0%; Pred.
